

**NAME**

newdb – zmailer database builder

**SYNOPSIS**

**newdb**

`[[-l|-u] [-a] [-s] [-t dbtype]] dbfilename [inputfilename]`

**DESCRIPTION**

A wrapper to *makedb*(8zm) supplying various default values from *ZENV*-variables, and doing database type specific file version rotations so that data users can safely take into use a new version of the database at their earliest convenient moment.

**ENVIRONMENT VARIABLES**

The script inherits *ZCONFIG* environment variable, but if it isn't available, a "configured in" default value will be used instead.

**Z-ENVIRONMENT VARIABLES**

**MAILBIN**

Where *zmailer*(1zm)'s component module binaries (and scripts) are located at

**DBTYPE**

What the the default database type to be used in the system, if sysadmin hasn't chosen something else.

**FILES**

*/opt/mail/zmailer.conf* (ZCONFIG)  
*/opt/mail/db/dbases.conf* (MAILSHARE/db/dbases.conf)

**SEE ALSO**

*makedb*(8zm), *zdbases.conf*(5zm). *zmailer*(1zm), *zmailer.conf*(5zm).
